Have you been getting elevated blood pressure readings? Are you feeling symptoms of high blood pressure?

Subject: blood pressure scrip

I was taking a scrip for blood pressure at (about) the same time I had started with the weight loss group - about June 2018 is when I started. I had very good results. I stopped taking the scrip after about 6 months or so. I do not remember the name of the drug, and my memory of the details may not be exactly right. Presumably you have the info in my medical record. I would like to start up on this blood pressure medication again. Will you write a scrip, or do I need to make an appointment and come in? Just let me know, I will do what ever it takes.
